

PACIFIC WILDERNESS O2 CLEANING POLICY

DATE: 3/27/07

We fully understand some manufacturers state their tanks are “*suitable for oxygen mixtures ...and is oil free and internally cleaned the same as the cylinders manufactured for oxygen service in the Medical sector.*”

However the same companies go on to say “*It should be understood that once the cylinders leave our factory or warehouse, we can not control or be held liable if the inside of the cylinder becomes contaminated by the shipper, filler or user. That is why as noted above it is the filler and or users responsibility to follow the proper industry procedures established for verifying cleanliness of the cylinder when filling oxygen mixtures.*”

Since there are inherent risks in filling any Cylinder with Oxygen during the Partial Pressure Blending Process and Pacific Wilderness runs all risks in filling these Cylinders –

It is our policy not to fill any Cylinder (New Cylinders included) unless it has been PROPERLY O2 CLEANED upon delivery by Pacific Wilderness.

Pricing for Oxygen Cleaning New Cylinders is as follows:

- **\$30.00 Fee will include all Parts & Labor for:**
 - Assembly / disassembly of tank
